polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA
from the normalized library NCI_CGAP_GC4 was prepared, and
so circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
1257096-1258611, 1469064-1470993, and 1475592-1476743).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

/note="Organ: mixed maounts of plasmid DNA from three normalized libraries (melanocyte 2NbHW, pregnant uterus NhHPU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones ande from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260212-265223,
340488-345479, and 484488-489479."

/note="Organ: mixed (see below); Vector: pT7T3D-Pac
/pharmacia) with a modified polylinker; Site 1: Not I;
Site 2: Eco With amounts of plasmid DNA from three
normalized libraries (melanocyte 2NbHM, pregnant uterus
NDHPU, and fetal heart NDHH19W) were mixed, and ss circles
were made in vitro. Following HAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.N.A.G.E. clones 260232-265223,
340488-345479, and 484488-489479."

with a modified polylinker, Site 1: Ecor 1; Site 2: Not 1; Not 10 CGAP E11 is a normalized cDNA library containing the following tissue(s): Chondrosarcoma. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oll-go-dry primer containing a Not 1 site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not 1, and cloned directionally into pT773-Pac vector. The oligomucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not 1 site and the (GT) B tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   620 bp mRNA linear EST 29-APR-1998 ob/77001.st NCI CGAP Kid3 Homo sapiens cDNA clone IMAGE:1473073 3' similar to gb:M64347 FIBROBLAST GROWTH FACTOR RECEPTOR 3 PRECURSOR AA873489 AA873489.1 GI:2969611

polylinker; Site_l: Not I; Site_2: Eco RI; Plasmid DNA
from the normalized library NCI CGAP GC4 was prepared, and
so circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified CDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
1257096-125861, 1469064-1470993, and 1475592-1476743).
Subtraction by Bento Soares and M. Patima Bonaldo. "

/note="Organ: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from pooled lung tumor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by Bento Soares and M. Fatima Bonaldo.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6143878
GENERAL INFORMATION
APPLICANT: Goodfellow, Peter
APPLICANT: Goodfellow, Peter
TITLE OF INVENTION: SOX-9 GENE AND PROTEIN AND
TITLE OF INVENTION: USE IN THE REGENERATION OF BONE OR CARTILAGE
NUMBER OF SEQUENCES: 21
CORRESPONDENCE ADDRESS:
ADDRESSES: SOLUly, Scott, Murphy & Presser
STREET: 400 Garden City Plaza
CITY: Garden City Plaza

Patent No. 5977433

Patent No. 5977433

APPLICANT: WILLIAMS, Mark

APPLICANT: Leemans, Jan

TITLE OF INVENTION: Maintenance of male-sterile plants

NUMBER OF SEQUENCES: 17

CORRESPONDENCE ADDRESS:

ADDRESSEE: BIRCH, STEWART, KOLASCH & BIRCH

STREET: 8110 Gatehouse Road, Suite 500 East

CITY: Falls Church

STATE: Virginia

COUNTRY: U.S.A.

ZIP: 2046

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC COMPABILE

MEDIUM SYSTEM: PC-DOS/MS-DOS

OMFWITHER: BN PC COMPABILE

The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor IC, cellular tumour antigen P53, and vasoactive intestinal coll propertides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, compounds candon and coronary arterial luxombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbestosis and vascular pathologies involving an endothelial
                                                                                                                    Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRN) primers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cerivity of (II) as useful in game therapy techniques to restore normal cerivity of (II) as useful in game against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensice, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity. 494 7 7 119 118 Length:

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonuclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises as least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 1'-end sequence, where the oligonucleotide which comprises a 1'-end sequence, where the oligonucleotide which comprises as 1'-end sequence, where the opination of the 5'-end sequence, 15 selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the chetection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs rapiemers allow obtaining of the full-length cDNAs represent human amino acid sequences; AAH13622 represent human amino acid sequences; and AAH13622 to AAH13622 represent human amino acid sequences; and AAH3629 to AAH13632 represent human amino acid sequences; and halfa632 represent contains are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Yamamoto J;

AAW72063;

Herpes simplex virus type-2 sequences - useful in, e.g. prevention a treatment of infection or inducing immunological response in mammal.

Claim 10; Page 64; 748pp; English.

```
This sequence represents a Herpes simplex virus type-2 (HSV-2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain SBS (deposited as ATCC VR-2546) DNA fragment designated Contig ID 93.

Based on homology, this sequence is a ULB protein. The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivirals. Antagonists of the proteins can be used to inhibit a viral. Polypeptide. The DNA sequence or a vector containing it can also be used to induce an immunological response in a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       365 TGGGCCCCAAGA-----AGAGACCACCTGAGCCATGGCCCTGCAGGAAGGA 318

The invention relates to a TSP1 (thrombospondin 1) domain-containing polypeptide comprising the proteins appearing as AAU80188 and AAU80189, encoded by cDNAS designated FGOS969 and FGO1896. Also included are proteins that are 50% homologous to the proteins and a polypeptide having at least one deletion, replacement, addition or insertion of amino acid in the proteins and having at least 8 repetitions of the TSP1 domain. The polypeptide can be use in drug compositions particularly for disorders associated with anglogenesis and vasculogenesis. The present sequence is the TSP1 domain containing protein encoded by cDNA FGO1869
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        536
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  499

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic

anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such a wocardial ischaemias; (d) wound healing; (e) neurological disease e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences

The invention relates to a TSP1 (thrombospondin 1) domain-containing polypeptide comprising the proteins appearing as AAU80188 and AAU80189, encoded by cDNsA designated FGO6966 and FGO1866. Also included are proteins that are 50% homologous to the proteins and a polypeptide having at least one deletion, replacement, addition or insertion of amino acid in the proteins and having at least 8 repetitions of the TSP1 domain. The polypeptide can be use in drug compositions particularly for disorders associated with anglogenesis and vasculogenesis. The present sequence is the TSP1 domain containing protein encoded by CDNA FGO6969

WPI; 2003-140585/13. N-PSDB; ACD13203 Novel isolated NOVX polypeptide useful treating or preventing disorders or syndromes such as autoimmune disease, allergies, Alzheimer's disease, stroke, Parkinson's disease, Huntington's disease or multiple sclerosis.

Claim 1; Page 144; 408pp; English.

The invention describes an isolated NOVX polypeptide (1) comprising a sequence selected from a sequence (S1) of 1121, 635, 299, 1720, 176, 583, 214, 395, 1089, 134, 427, 1333, 407, 806, 804, 1253, 382, 1020, 176, 583, 506, 759, 390, 133, 215, 240, 1069, 116, 439, 1138, 477, 316, 269, 219, 305, 406, 460, 365, 380, 103, 215, 240, 1069, 116, 439, 1138, 477, 316, 269, 219, 305, 406, 460, 365, 380, 1036, amino acids fully defined in the specification, and the mature form of S1. (1) is useful for treating or preventing a pathology associated with (I) in a subject, preferably human, or for identifying an agent that binds to (1), where the agent is a callular receptor or a downstream effector. (1), a polymucleotide (II) encoding (1) or an anti-(1) antibody (V) is useful treating or preventing discretes or syndromes such as autoimmune disease, allergies, Albheimer's disease, stroke, Parkinson's disease, Huntington's disease, multiple streams or syndromes such as autoimmune disease, allergies, host disease, pancreatitis, obesity, ulcers, anaemia, cancer, trauma, viral, bacterial or parasitic infections, cardiomyopathy, atheroscalerosis, addiction, accuired immunodeficiency syndrome (AlDS) or Crohn's hypertension, accuired immunodeficiency syndrome (AlDS) or Crohn's disease. (1), (II) or (V) is useful in screening assays, detection assays (e.g., chromosomal mapping, tissue typing, forensic biology), predictive

WPI; 2003-516152/49. N-PSDB; ADCS1661.

A membrane binding- or secretory-MEGF8 gene and a protein encoded by the gene, for diagnosis and treatment of diseases caused by plexin domain.

SEQ ID NO 4; 53pp; Japanese.

; 1

Claim

```
The present invention relates to novel human membrane binding- or secretory-MEGF8 proteins, and the polymucleotide sequence encoding them. The sequences are useful in the identification of a plexin domain for the diagnosis and treatment of diseases caused by plexin domains participating in the induction of axial fibres of nerve cells, development of the heart and skeleton, immune response, vasculogenesis, and the growth and metastasis of cancer. The present represents a human membrane binding- or secretory-MEGF8 protein.
                                                                                                                                                                                                                                                                                                                                                                                                               182 GACTTAACACTTCTTACGCAATGCTTCTAGAGTTTTATAGCCTGGACTGCTACCTTTCAA 241

The present invention relates to novel human membrane binding- or secretory-WEGF8 proceins, and the polynucleotide sequence encoding them. The sequences are useful in the identification of a plexin domain for the diagnosis and treatment of diseases caused by plexin domains participating in the induction of axial fibres of nerve cells, development of the heart and skeleton, immune response, vasculogenesis, and the growth and metastasis of cancer. The present represents a human membrane binding- or secretory-MEGF8 protein.
                                                                                                                                                                                                                                                                                                                                                                                      761 GlyvalprodlyGlySerGluIleSerPhePhePhePheLeuGluProTyrArgSerSerSer 780

The invention relates to a DNA sequence encoding the pig recombination activation gene 1 protein (RAG-1) protein, or a variant protein with similar activity derived by the addition, deletion and/or substitution of one or more amino acid residues. The DNA and associated methods and reagents are useful in the production of knockout pigs, in which the function of the endogenous RAG-1 gene is regulated so that the pigs have no acquired immunity, and can be used for production of tissues suitable for human transplantation. The current sequence represents the pig RAG-1 amino acid sequence.

```
This sequence is encoded by the cDNA of the acetyl CoA carboxylase (ACCase) gene which was amplified using the primers given in AA093221-30 and AA093233-36. This full length ACCase gene may be used to produce a Acransgenic plant such that it expresses a changed amount of ACCase. The ACCase gene may be used to regulate the production of fat/protein in agricultural plants
                                                                                                                                                                            1507 GlyThrAlaLeuGluLeuLeuTrpAlaSerGlnHisProGlyValLys----- 1522

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
